It currently consists of 26 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

**Ihis sequence will be replaced

** by the finished sequence as soon as it is available and the accession number will be preserved.

** Ili32 11811: contig of 11731 bp in length

** 11812 18811: gap of 10 bp

** 25,10 25.10

This isolated polynucleotide codes for the Staphilicoccus aureus RNA-uspendent amidotransferase C (RetC) protein (See AN61464). It was contained from a library of clones of chromosomal DNA of Sucress in E. coll. S. eureus WOH 29 strain containing the coll. S. eureus WOH 20 strain containing the coll. S. eureus WOH 20 strain containing the coll. S. eureus MOH 20 strain containing the coll. See the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA encoding S. aureus RNA-dependent aminotransferase C - used to diagnose and treat e.g. thyroiditis, lung abscess, infective endocarditis, secretory diarrhoea, cerebral abscess, conjunctivitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            endophthalmitis, preseptal and orbital celluitis and darczyocystitis), kidney and urinary tract disorders (e.g. epidiaymitis, intrarenal and perinephric abscess and toxic snock syndichme), skin disorders (e.g. impetigo, folliculitis, cutanecus abscesses, celluitis, wound infection and bacterial mostils) and bone and joint disorders (e.g. septic arthritis and stepnyelitis), to assay genetic variation and to screen for artibacterial agents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Staphyjococcus aureus RNA-dependent amidotransierase C (ratC) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    blepharitis; conjunctivitis; keratitis; endophthalmitis; cellulitis; darcryocystitis; epididymitis; intrarenal abcess; perinephric abscess; toxic shock syndrome; impetigo; folliculitis; cutaneous abscess; myositis; septic arthritis; osteomyelitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RatC; RNA-dependent amidotransferase C; antiblotic; antibacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This isolated polynucleotide codes for the Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA-dependent amidotransferase C (Ratc) protein (see AAW61469). Novel ratB polypeptides of the invention (see AAW61467) way interact with ratC and/or ratA (see AAW61470) polypeptides to form ratB:ratC and ratB:ratA heterodimers or ratB:ratA:ratC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        interotrimers. Such heterodimers and heterotrimers are useful in methods of the invention, particularly vaccine and drug SCreening methods, e.g. for assays of ratB antagonists useful as antibacterial agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             empyaema; lung abscess; infective endocarditis; diarrhoea; splenic abscess; retroperitoneal abscess; cerebral abscess;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      31.7%; Score 32; DB 19; Length 300; 68.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella premioniae, Pseudomonas aeruginosa and Enrococcus facella. In the invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to the introducts can be used in proliferation, to expresse these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery for immologous nucleic acid sequence is also useful to screen. Our immologous nucleic acids which are required for cell proliferation in a wide variety of capalisms. The present sequence encodes an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Carr GG;

The intention relates to antisense inhibitors of gecus essential to prokar other cellular proliferation, their use in identifying the essential genes. Their use in the discovery of novel antibicios, the essential genes their was in the discovery of novel antibicios. The essential genes their selections and the encoded proteins. The prokaryones used are Escherichia coll, Staphylococcus aureus, Salmonella typhi, Miebalella premotionis, also useful for the identification of potential new targets in whencion is also useful for the antisense modele acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the express proteins. The proteins can be used to screen compounds in ratical drug discovery programmes. The antisense nucleic acid sequence is also useful to screen the house of the confidence of the co

```
This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable acidum, preferably selected from a floppy or hard disx, random access memory (RAM), read-only memory (ROM) or CD-ROM, Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be obtained specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a kit for the immunodatection of polypeptides can also be used in a kit for the immunodatection of standing ceilulitis, eyelld infections, food poisoning, osteomyelitis, shurding ceilulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syntome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used in the polypeptides. The new DNA sequences can be used in the polypeptides. The new DNA sequences can be used in the polypeptides. The new DNA sequences can be used in the polypeptides.
                    gruphese bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence.
                                                                                                                                                         These bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9494 AIGCTIICIAAIGTGTTGGCCAITTCTICCGIIICIICAGGAGAAITIGAAGICIIGGA 9553

capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in elucidating cell signalling and insection interactions in higher enkaryotes for the development of disoloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed at five sequence data for this patent did not form part of the printed at five view. The abblished_pet_sequences.

                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DAM sequences (ABLIGIT), expressed DAM sequences (ABLIGIT) and the encoded proteins. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Center: Whitehead Institute/ MII Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This record contains 246 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   727: contig of 727 bp in length 728 827: gap of 100 bp 622 1701: gap of 100 bp in length 602 1701: gap of 100 bp 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9485: gap of 100 bp
10258: contig of 773 bp in length

(see http://www.hgsc.bom.tmc.edu/docs/Gembank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of §9 contags. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chemistry: Dye-terminator Big Dye: 100% of reads

                                                                                                                                                                                                                                                                                                                                      Louis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Louis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOILUE: This sequence may not represent the entire insert of this close. It may be shorter because we only sequence overlapping close sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data. (1.e., phred quality >-30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOURCE INFORMATION:
The APDI-11 human BAC library was made from the blood of one male doncy; as described by Oscedawa.K., Noon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jony, P.J., (1996) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong VECIOR; pBACE3.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The close sequenced to the right is RFII-52FI6, 2000 by oreciap. Actual start of this clone is at base position i of RFII-373H2; actual end is at base position 63477 of RFII-62PI6.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

consists of 14 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             33.7%; Score 34; DB 2; Length 319378; 63.4%; Pred, No. 17; cive 0; Mismarches 30; Indels 0;

Gaps between the configs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequencing vector: Plasmid:

                                                                                                                                                                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgs.bom.tmc.edu/docs/Goebank_draft_data.html).
NOTE: This is a "vorking draft' sequence. It currently consists of 49 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
